

Baits, Texas and Carolina

All about fishing - Fishing.no Usually I catch small perch-herbalist weighing up to 200-250 g. the water Area of fishing is replete with various interference in the form of grass, rocks snags which consistently catch on lures intended for bass. When the fishing can sometimes be a reasonable number of breaks on the toe of the dead, say three to five to use special snap-in may not be worth it. But when ten casts have seven or eight dead hooks or the lure right after splashdown collects the grass it makes sense to resort to special montages. How justified sinker bullet In the practice of spinning what often happens is that a passive bass not responding Wobbler no turntable and Microdrives bait with a pointed bottom posting, it is possible to provoke a strike If the bottom is relatively clean, you can merely megagame on the classic jig-heads or gruzenergo but in the presence of interference above the pubic this snap-in, clings very often and catching hardly will give pleasure. My microjava practice has shown that when using the snap sinker-spool conditions in heavily overgrown water area of dead snags almost does not happen and the lure clogged with vegetation 80% less than the classic installation. When fishing on the rocky bottom of the statistics are less positive because most often between the stones jammed itself sinker including bullet-shaped forms but in comparison with the spherical sinker loss rate of lures is significantly lower. A large part of water bodies in the southern Urals where I fish is in a mountainous area and water bodies generally have a rocky bottom. Coast and stall in General is a solid stone. I remember a typical case when ten kaboosh classic accessories within 10-15 m from the shoreline I had ten dead snags. Transaction which I was then ispolzoval classic step with minimal contact with the bottom on the pause. But it did not help. Texas or Carolina The differences in structure of Texas and the Karolinska snap-ins small. Is they that in Carolina the hook with bait and sinker posted leash and in Texas the bait is directly behind the sinker. The scope of the Texas small depth and grass hence the use of lighter sinkers. Carolina is most often used on rocky bottom at a greater depth and hence the mass necessary big. In microcosom embodiment, the weight rarely exceeds 3 g and often is 1-15 g. One of the features of the original snap often Carolina devised for catching bass is sinker-bullet is made of brass or bronze and faceted glass
